

NGUYEN CONG THANH

AI ENGINEER

Address: Bac Tu Liem, Ha Noi | Phone: 0333265931

Email: nguyenconghanh21904@gmail.com | Github: <https://github.com/setth123>

Linkedin: <https://www.linkedin.com/in/nguyễn-thành-17544231b>

SUMMARY

I'm a highly motivated and detail-oriented student with a strong foundation in Machine Learning, Deep Learning, Computer Vision and Natural Language Processing (NLP). Proficient in Python, TensorFlow, PyTorch, Numpy, Pandas, with hands-on experience in model training, evaluation and deployment. Eager to apply knowledge to real-world AI projects, enhance skills, and contribute to innovative solutions.

EDUCATION

Hanoi University of Industry

Bachelor of Software Engineering

Bac Tu Liem, Ha Noi

Expected 06/2026

- **CPA:** 3.47/ 4.0
- **Relevant Coursework:** Data Structures and Algorithms, Artificial Intelligent, Calculus, Linear Algebra, Probability and Statistics, Discrete Mathematics and Database System

PROJECTS

Multimodal Chatbot

March 2025 - April 2025

- Description: Developed a multimodal chatbot that combines state-of-the-art language and vision models to: understand and generate human-like conversation, processing PDF and images files. searching and reasoning.
- Technology: PyTorch, HuggingFace Transformers. PDFPlumber, DuckDuckGo, Gradio,
- Model: Mistral (Quantized), Blip , Bart Large, Stable Diffusion
- Key features:
 - Understand and generate human-like conversation
 - Generate images from text
 - Reasoning and searching for information
 - Processing PDF and images files
 - Summarize long text for better context
- Github: <https://github.com/setth123/Mistral-Chatbot.git>

Fake News Detection with Longformer

Jan 2025 - Feb 2025

- Description: Developed a fake news classification system using the Longformer transformer model, finetune on a dataset of 40,000 records, each containing long-form news articles . The project focuses on identifying misleading or false information in online content.
- Technology: PyTorch, Hugging Face Transformers, LoRA (Low-Rank Adaptation), FP16
- Model: Longformer
- Key features:
 - Fine-tuned Longformer for long-text classification.
 - Integrated LoRA and FP16 to accelerate training and reduce GPU memory usage.
 - Achieved high classification accuracy on real-world news data
 - Implemented dynamic padding for memory-efficient tokenization
- Github: <https://github.com/setth123/Longformer-Finetuned.git>

SKILLS & ACTIVITIES

Programming languages: Python

Technologies: Scikit-Learn, TensorFlow, PyTorch, Pandas, Hugging Face Transformer, LLM, CNN, OpenCV

Version Control: Git, GitHub

Others: Prompting, AIOps

Languages: Fluent in Vietnamese; Conversational Proficiency in English

Activities: HIT Club (HaUI Computer Club), HaUI AI Laboratory
